

# Homemade Energy- Generate electricity with your own solar panels or wind-mill

---

Why pay thousands of dollars in energy costs when you can just “Do-it-yourself”? Yes you heard it right, home made energy is the one answer to all your energy issues!

Generating power at home is simple as 1-2-3!! It takes less then a week to set it up and won't break your bank in the process.

Home made Energy Guide gives you two options: System 1 uses solar power to make energy and system 2 offers Wind-mill technology to fulfill your energy needs. Both these systems come with easy to understand, set by step instructions!

Do you think homemade energy is a waste of money? Well, think again, because with our certified money back guarantee you don't have anything to loose! Similar systems are available for up to \$ 2000 else where on the internet. But Homemade Energy guide costs only \$200.

You might have to spend 2 months electricity bills worth of money, but imagine not needing to pay the bills ever again! And when that meter starts running back wards, the electricity company will end up paying you! How about that?

The Guide is so simple that even kids can help you build your new renewable energy resource!

You don't need a lot of space, the Home Made Energy wind turbine can be put up in your apartment balcony. And it looks totally professional!

So what's your favorite method of saving the environment? The solar- based system or the wind power based system? No matter what your choice is, if you build them using the Home made Energy guide, these power-generators will definitely rip your bills to ZERO!

You will be able to build your solar panels using material bought from your local hardware store! The homemade energy guide also tells you how you can spend as little as \$100 on your own home-made solar panels!

So what are you waiting for? Saving the world was never this much fun .... and cost-effective!
